Appl. No. 10/678,023
Reply to Office Action of November 8, 2006PATENTListing of Claims:

1. (previously presented) A biologically pure culture of a strain of *Chromobacterium subtsugae* sp. nov. having all the identifying characteristics of NRRL B-30655.
2. (cancelled)
3. (previously presented) A biologically pure culture of strain of *Chromobacterium subtsugae* sp. nov. which has the 16S rDNA gene sequence of SEQ ID NO:1.
4. (withdrawn) An insecticidally-active metabolite obtained from the strain of claim 1.
5. (withdrawn) A supernatant, filtrate or extract obtained from the strain of claim 1, wherein said supernatant, filtrate or extract has insecticidal activity.
6. (previously presented) A composition useful for control of insect pests, which comprises the strain of claim 1.
7. (withdrawn) A composition useful for control of insect pests, which comprises the metabolite of claim 4.
8. (withdrawn) A composition useful for control of insect pests, which comprises the supernatant, filtrate or extract of claim 5.
9. (currently amended) A method of controlling insects, comprising applying in an area where an insect is to be controlled an effective insect control amount of a metabolite in *Chromobacterium subtsugae* sp. nov., an insecticidally-active metabolite obtained from *Chromobacterium subtsugae* sp. nov. or a supernatant, filtrate or extract obtained from *Chromobacterium subtsugae* sp. nov. from the supernatant, filtrate or extract of the *Chromobacterium subtsugae* sp. nov. of claim 1.

PATENT

10. (withdrawn) A method for producing an insecticidally-active metabolite from the strain of claim 1, which comprises:

growing the strain of claim 1 in a culture medium under conditions effective to produce an insecticidally-active metabolite.

11. (withdrawn) The method of claim 10 which further includes the step of separating the insecticidally-active metabolite from the culture medium.
